Follow the steps below for the

KITCHEN OF YOUR DREAMS

filled with with beautiful contemporary or traditional cabinetry.

MAKE A LIST: Building a new home? Include things you would like in your new space. Remodeling? List things you like and dislike about your existing space.

What is most important? Counter space, eating area, free-standing island?

What appliances do you want in your new kitchen? Will they be free-standing or built-in? Don't forget to think about what type of sink and lighting you want. If you already have your appliances, you will need to list and measure them to ensure a proper fit in your new kitchen.

MEASURE WALL-TO-WALL: Begin by measuring the room wall-to-wall. Measure each wall horizontally at three locations: floor level, mid-level (48 in. from floor), ceiling level. Record all measurements in inches in the chart to the upper-right.

ROUGH DRAWING: Using the grid to the right, make a rough drawing of the shape of the room. Represent each wall, door, window, bulkhead (soffit) and any protrusions or recessed areas. Only accuracy counts, not scale.

MEASURE WALL SECTIONS: (A wall section is from one corner to an outside edge of window or door way.) Measure each wall section. Record in inches on drawing.

MEASURE WINDOWS AND DOORS: Measure each window and door from outside edge of casing or trim. Record in inches on drawing. Note which way doors open into room.

CENTER OF SINK: Locate the centerline of sink by measuring from one corner of the wall. Record in inches on drawing.

CENTER OF RANGE: Locate the centerline of range by measuring from one corner of the wall. Record in inches on drawing.

FLOOR TO CEILING: Measure from floor to ceiling at several locations. Record the smallest dimension in inches on drawing. For bulkheads (soffits), record dimension from floor to bottom of bulkhead. Also record projection (depth) of bulkhead. For vaulted ceilings, record smallest and greatest dimensions.

LOCATE OUTLETS, ETC.: Using a symbol (⊖ Outlet; \$ Switch; * Fixture) indicate location of each electrical and phone outlet, switch, and light fixture. Indicate the height from the floor and distance to nearest corner in inches on drawing. Also, note any additional items that may interfere with cabinet placement including heating vents, plumbing, etc.

Start in any corner and keep your measurements in inches. Remember that **ACCURACY**, not scale, is very important.

Bring your measurements to the **Just Cabinets** knowledgeable, friendly **Kitchen Designers** for a **FREE COMPUTER LAYOUT & CABINETRY QUOTE**
